## DETAILED ACTION

### *Election/Restrictions*

Applicant's election with traverse of the species of Figure 15 in the reply filed on November 29, 2004 is acknowledged. The traversal is on the ground(s) that independence and distinctness has not been shown, nor search burden. This is not found persuasive because MPEP § 803 states, "Under the statute an application may properly be required to be restricted to one of two or more claimed inventions only if they are able to support separate patents and they are either independent (MPEP § 806.04 - § 806.04(i)) or distinct (MPEP § 806.05 - § 806.05(i))." (emphasis added) The species are independent, since the species are mutually exclusive and capable of supporting separate patents. See MPEP § 806.04(f). Search burden is never a sole consideration. There would be no search burden if applicants state the species are obvious variants of one another.

The requirement is still deemed proper and is therefore made FINAL.

In the election requirement mailed on October 28, 2004, species were believed to be directed to Figures 11-16, respectively. However, the species of mesh inserts are directed to Figures 8, 15 and 16, respectively. Figures 11-12 are directed to microfeatures on the heat exchange plates 30.

Upon further review, this application contains claims directed to the following patentably distinct sub-species (i.e. spacing of the mesh insert relative to the heat exchange plate) of the claimed invention:

- I. The sub-species illustrated in Figure 8 (with backing layer 50);
- II. The sub-species illustrated in Figure 10;

Art Unit: 3753

III. The sub-species illustrated in Figure 13; and

IV. The sub-species illustrated in Figure 14.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed sub-species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-2, 4-5, 15, 19-21, 25-26 and 28 appears to be generic.

Applicant is advised that a reply to this requirement must include an identification of the sub-species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional sub-species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the sub-species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
